

**ABOUT ADVANCED TASK SCHEDULER**

Advanced Task Scheduler software is available in Basic, Professional, and Network Editions for automating computer or network tasks. Supported functions include launching of applications, scripts, and batch files; opening documents and Web pages; sending e-mail; shutting down and restarting the computer; archiving via FTP, and more. A free trial version is also available.

**ADVANCED TASK SCHEDULER BASIC**

Advanced Task Scheduler is a multi-functional task scheduler, which allows you to automate all your day-to-day tasks: launch programs, scripts and batch files, open documents and web pages, display popup messages, play sounds, send network and e-mail messages, shut down and restart your computer, establish and close network connections, perform FTP and file operations, and much more.

Advanced Task Scheduler offers a full set of scheduling tools that allow you to run scheduled tasks automatically, as a one-off, a specified time after system startup, or secondly to yearly. Alternatively, set tasks to run via a hotkey, on computer idle, on network connection being established, on user log-on/off, program start/stop, etc.

Advanced Task Scheduler icons will appear in your system tray, giving you access to all its features via a popup menu, which appears on right clicking. Pressing a hotkey restores Advanced Task Scheduler. The scheduler can also be launched as a Windows Service and work in the background, enabling all scheduled tasks to run smoothly without taking up any desktop space. This feature means Advanced Task Scheduler can be run even when no user is logged on.

Advanced Task Scheduler can record all executed tasks in a log file or send them straight to your inbox, letting you know exactly what tasks are being executed and when.

Advanced Task Scheduler allows you to automate a wide range of tasks, including all the basics listed above, as well as sending network and e-mail messages, and performing FTP and file operations.

**ADVANCED TASK SCHEDULER PROFESSIONAL**

Advanced Task Scheduler Professional is a multi-functional task scheduler, which allows you to automate all your day-to-day tasks: launch programs, scripts and batch files, open documents and web pages, display popup messages, play sounds, send network and e-mail messages, shut down and restart your computer, establish and close network connections, perform FTP and file operations and much more.

Advanced Task Scheduler offers a full set of scheduling tools that allow you to run scheduled tasks automatically, as a one-off, a specified time after system startup, or secondly to yearly.

Alternatively, set tasks to run via a hotkey, on computer idle, on network connection being established, on user log-on/off, program start/stop, etc.

Advanced Task Scheduler icons will appear in your system tray, giving you access to all its features via a popup menu, which appears on right clicking. The scheduler can also be launched as a Windows Service and work in the background, enabling all scheduled tasks to run smoothly without taking up any desktop space. This feature means Advanced Task Scheduler can be run even when no user is logged on.

Advanced Task Scheduler can record all executed tasks in a log file or send them straight to your inbox, letting you know exactly what tasks are being executed and when.

In addition to all the basic capabilities, Advanced Task Scheduler Professional allows you to encrypt your settings and task list, assign multiple shortcuts and schedules for each task, use login-watch, window-watch, process-watch and file-watch features, run-on-holiday function, randomized time and much more.

## ADVANCED TASK SCHEDULER NETWORK

Advanced Task Scheduler Network is a Client/Server task scheduler, which allows you to create scheduled tasks on the server and manage them from any computer on the net remotely. Client/Server architecture of this software in addition to all the capabilities of the Professional Edition provides IT departments and professionals with an excellent solution for managing scheduled tasks on a variety of network environments.

Server can be installed as service on a network server, embedded system, PLC, terminal server, web server and any other remote system that can be connected by TCP/IP protocol. The service is working in the background, enabling all scheduled tasks to run smoothly without taking up any desktop space. This feature means Advanced Task Scheduler can be run even when no user is logged on.

Advanced Task Scheduler Network automates a diversity of tasks: launch programs, scripts and batch files, open documents and web pages, display popup messages, play sounds, send messages, shut down and restart your computer, establish and close dial-up connections, perform FTP and file system operations and much more.

Advanced Task Scheduler offers a full set of scheduling tools that allow you to run scheduled tasks automatically, as a one-off, a specified time after system startup, or secondly to yearly.
